

IPDV Changes

Matt Zekauskas

Phil Chimento

27 March 2000

Minor Stuff

- Rewrites of clock-related sections for clarity
- Better discussion of clock-related errors

Major Stuff

- Treatment of undefined delays:
specifically ignore (more in Phil's talk)
- Removal of the bi-directional delay
variation with unsynchronized clocks
discussion (the part pushed to the
appendix last time)

Next Steps

- Phil using IPDV definitions for report to Surfnet on QoS (work still in progress) -- tests viability
- Phil is working on new analyses (time series)
- ITU, in a draft called I.381, is looking at jitter during bounded intervals (5 min)
- Ready to ship?
