

Initial work items

- **Build design teams (mainly to speed up process) and launch work**
 - Framework (framework and service requirement documents/sub-teams)
 - BGP/MPLS - based VPNs (2547)
 - Virtual router - based VPNs
 - Layer 2 VPNs
 - IPSEC VPNs
 - a team to address Inter-AS (SP) VPNs ?
- volunteers for design teams : please send an email to chairs and, if possible, also sign on the relative list at the end of the meeting
- the objective is to finalize teams in 4 weeks (scope, participants, editors)

Design teams

- Necessarily a limited number of people per team
- Teams will just speed up the process
 - the whole group will participate into the various efforts and will take all decisions
- Framework team
 - expected output: service requirement and framework documents (sub-teams)
 - transversal effort : we need complementary expertise (volunteers from routing, security, management, QoS domains) , SPs should also be in
- “Profile” team(s)
 - a mix of (Vendor) representatives in each team should speed up the process towards fully interoperable implementations of each profile solution
 - complementary expertise from various domains is also useful here
 - SPs still welcomed (not mandatory)

- **Objectives for next IETF March 01 meeting**
 - have a first version of deliverables
 - one service requirement document
 - one framework document
 - **one basic document for each “profile” team**
 - continue discussion on profile-specific new IDs (against requirements)
- **Interim meeting** (contents, date, host) ?
