

Smart Notification and Alarm Protocol (SNAP) draft-shapira-snap-03

IETF-53 Update

Noam Shapira
March 21, 2002

Top Level View

Changes in the current version

- Improve definition of counters and the ability to add counters
- Added that SNAP is case-insensitive and dash convention name (request-type)
- Removed GMT requirement from Message-Send-Time
- Removed MIXER reference
- Request order – removed from MUST to SHOULD

What is still missing/open?

- BEEP VS. HTTP
- Attachments names and number:
 - Should it be in SNAP?
 - If so, how to pass it?
 - It is a non-mandatory attribute – should we advise the email server how to do it?
