19th November 2002

Document Name

“experiments” or “recommendations”?

We need to know what works, what does not, why?

Actually this is easy.....

But, to be useful, need to say:

How do you best make this work?

Needs people to think on it,

Also need ot look at other scenarios & link types ...

One document or two?

Two issues

Unicast IPv4

Multicast IPv4

Pros:

Two tend to evolve differently

Cons:

Nice to have one document

Security
