

# 56th IETF Meeting – March 2003- IPPM Working Group

---

Emile STEPHAN

France Telecom R&D

IPPM REGISTRY

## Summary

---

- Change since 01
- Simplification
- Conclusion

# Change since Version 01

---

- Registrations rules simplified;
- Draft sub tree removed;
- Loss pattern metrics of the RFC3357 added to the registry.
- ipdv metrics of the RFC3393 added to the registry.
- Periodic streams metrics of the RFC3432 added to the registry.

# Registry structure and management

---

The registry has 2 root branches:

- Metrics defined in a RFC are identified in the 'rfc' tree;
- Metrics defined elsewhere may be identified in the 'other' tree.

When the draft is considered mature the authors may insert a registry in the section 'Standard metrics registry' of their document. The chairs provide metrics identifiers.

A registry template is proposed.

# Conclusion

---

The draft is stable.

Proposed roadmap:

- Review before mid April
- Then Last call ?
