RFC 2833bis

Henning Schulzrinne
Columbia University

Changes

- No major technical changes
- clean-up of MF description (SS#5, R-1, etc.) based on Telcordia and ITU documents
- full example for redundancy and other editorial improvements
- believed to be ready for WG last call, but …

Open issues

- No interop statement success – delegation did not work
- Unclear whether support for particular events need testing – can trivially generate implementations that print out event name
  - does removing event names benefit anyone?
- Sufficient to show use of
  - basic timing mechanism
  - RFC 2198
- Will submit brief feature list after IETF
- Calling for volunteers
- Alternative: cycle at Proposed
- Suggestion: decision deadline by next IETF
