

MIPv6 Interactions with GPRS/UMTS Networks

- *draft-chen-mip6-gprs-00.txt*
- GPRS packet data networks implement packet filters at the GGSN
- Issues similar to the ones presented in the firewall I-D (*draft-le-mip6-firewalls-00.txt*) apply to 3G networks as well
- Scenarios/issues when the MIPv6 MN is attached to the GPRS network as well as the case when the CN is a MIPv6 node are covered in the I-D
- Informational I-D that highlights the problems of operating MIPv6 over 3G networks
- The issues that arise are not a result of MIPv6 design itself and hence this I-D does not recommend any changes
