

# Network Mobility Summary - IETF59

---

*TJ Kniveton - Nokia*

# Milestones, Goals, Terminology

---

- *Updates have been covered here*
- *We will soon go through last call for terminology and requirements drafts*

# Basic Support Draft

---

- *WG and IETF last call have occurred*
- *We have not yet seen a NEMO-external security analysis*
- *Draft will continue forward in standardization path*
- *40-50 people in the room have read the draft*

# Multihoming

---

- *Is there interest in this work?*
  - *About 35 people raise hands*
- *What is the difference between generic multihoming and NEMO-specific?*
- *What generic work is not currently covered in other groups that should be?*
- *Can we identify NEMO work to do?*

# Basic Support Useages

---

- *Should title reflect that it's about home networks?*
- *No comments against continuing this as a WG document.*

# Prefix Delegation

---

- *Delegating from HA to MR*
  - *HA should act as DHCPv6 delegating router, MR acts as requesting router*
- *MR becomes virtual router and virtual DHCP server*
- *Probably best to split this into two separate drafts*
