# NEMO Basic Support Status Update

TJ Kniveton, Nokia
IETF 59

I E T F

Status of Basic Support

- Draft has passed through WG last call

  - comments received, various issues addressed in draft -02

  - one open issue remaining (#30), just needs slight clarification in text -03

- Draft also passed through IETF last call with no comments - ended February 16 2004

- State in Document Tracker - still "in last call"

Security Considerations

- This is listed as a separate work item, but all known security items specific to basic support are in the basic support draft

- What is the role for threats analysis document?

  - New document released yesterday; we won't discuss it at this point

  - Do people want to keep threats analysis? Make all analyses specific to draft/RFC?

Implementations

- Various groups have implemented NEMO

  - (total count #?)

- Interoperability testing between a few implementations has been performed (see following presentation)

- No major problems found with basic support scheme

Conclusions

- Basic Support document passed IETF last call, but still listed as "in last call"

- Have not received detailed security analysis

- Various implementations exist

- WG is ready to move document forward
