

draft-ietf-avt-rtcp-xr-mib-02.txt

Authors: Alan Clark, Amy Pendleton

Changes since -01

- More syntax cleanup: incorporated "MIB doctor" comments, now very clean!
- Alignment with SIP draft
- Expanded range of compliance "options" to cover a wider range of applications
- Attempt to create alignment between RTP MIB and RTCP XR MIB: session id table in RTCP XR MIB should be incorporated into updated version of RTP MIB.
 - This should be enough to close off concerns raised on mailing list, no further comments received.

Implementation status

- Several implementations exist, no issues found thus far.

Next Steps

- Incorporate Session Table into RTP MIB, but see no reason to delay this draft further.
- Any other comments?
