

S RTP- TESLA Status

Mark Baugher

Elisabetta Carrara

draft-ietf-srtp-tesla-03.txt

- SRTP-TESLA has completed WG review
- We're in IESG review
- A few issues have emerged

Issues

- R. Housley asked for clarifying text on the use of an 80 rather than a 96-bit tag
 - The shorter tag is in line with the HMAC standard but not 32 bit aligned as IPsec is
- C. Perkins asked for clarifying text on the packet format changes
 - SRTP transforms change the packet structure without the need for new RTP profile
- E. Davies suggested a number of editorial clarifications (still in discussion)

Actions

- Will finish exchanges with E.Davies on his functional & editorial concerns
- Will submit new I-D after this to address
 - Russ's issue
 - Colin's issue
 - Elwyn's improvements
