

[Message String Extension]
changes since first draft

Venkateshwara Sastry, Kent Leung
draft-sastry-mip4-string-extension-03.txt
IETF 64 – Nov. 10, 2005

[Changes in -01 revision]

- Incorporated comments from ietf62
 - Indicated the “text” in Message String Extension is for the user of mobile node
 - Clarified on handling Message String Extension by MN. For example, new text in Section 1. is “
.... message can be displayed on the Mobile Node's user interface, logged or handled in any other implementation dependent way, depending on the form of the Mobile Node”

[Changes in -02 revision]

- Added support for Message String Extension in Revocation messages
- Corrected text in “Section 5. Security Consideration”, when Message String Extension is added by Foreign Agent
 - Previous text was “... If the extension is added by the Foreign Agent ... it MUST appear after MHAЕ”
 - New text is “... If the extension is added by the Foreign Agent ... it MUST appear after MHAЕ whenever present”

[Changes in -03 revision]

- Incorporated the review comments from mailing list
 - Changed example in Section 4, to explain the use of message string extension in the context of a prepaid service.
