

QoS Mechanism Identification in SDP

draft-polk-mmusic-qos-mechanism-identification-00.txt

Gonzalo.Camarillo@ericsson.com

Overview

- Agree on the QoS mechanism to be used for a particular media stream
 - E.g., RSVP or NSIS if both are supported
- Support asymmetric mechanisms
 - E.g., a different mechanism for each direction
- Orthogonal to preconditions

Open Issues

- Is there a need to agree on something else in addition to the mechanism to use?
 - E.g., parameters to start the mechanism
- If so, should this draft tackle how to agree on the values of such parameters for each QoS mechanism?
 - Probably not
