Feature Creeps

Advancing the SIP Standard

Documenting the feature sets

Just getting started

- We know we don't want to replicate each MUST/SHOULD/MAY, but instead want to capture "features" that encapsulate groups of those requirements.

- Example: "A registrar successfully adds a binding against an AOR" instead of "A registrar returns a 200 OK to a REGISTER containing a contact not currently in the database and puts that contact in the 200 OK it returns".

Tools

- global.sipit.net
  - globally accessible wiki for inter-SIPit interoperability issues and information
  - Will be used to brainstorm first set of features

Next Steps

- Brainstorming on global.sipit.net
- Initial draft (by San Diego?) proposing features
  - Not as important as finishing, e.g., outbound and fork-loop-fix
