# GDOI Generic Message Authentication

draft-weis-gdoi-mac-tek-00
Sheela Rowles
IETF 73
Minneapolis

# Problem

- There are a number of routing applications requiring the capability to share policy and keys.

- In Philadelphia, we were asked to try and solve the problem generically.

# What the draft addresses

- The draft provides the means to provide authentication using GDOI.

- GDOI distributes the MAC and policy to applicable routing applications:
  - RSVP
  - NLS

# Future

- Should this be a working group item?
