RFC 3281 Update ID
draft-ietf-pkix-3281update-01.txt

IETF 73 – November 2008

Stephen Farrell
Russ Housley
Sean Turner

Why Update 3281?

- Errata #302 changed the bits on the wire to align with X.500.

- We wanted errata incorporated in to draft-ietf-pkix-new-asn1.

- It was also time for an update.

- It's easy!
  - We're only incorporating verified technical errata.
  - Format is replace OLD text with NEW text (i.e., incremental update).

What's left to do?

- Authors: Figure out why we have two OIDs for clearance attribute and what to do about it.

- Tim: Change status of Errata #1479 and to be submitted errata to "Verified".

- Jim/Paul: Update ASN.1 in draft-ietf-pkix-new-asn1 ID.

- WG: LC after next version.
