Changes done in version 03 & 04

- Received few review comments in the WG mailing list for 02 version
 - <http://www.ietf.org/mail-archive/web/dhcwg/current/msg10090.html>
 - <http://www.ietf.org/mail-archive/web/dhcwg/current/msg10081.html>
- From the suggestions, the consensus was *to remove* **DHCPLEASEUNASSIGNED** response for query-by-remote-id and keep it similar to query by MAC and client-id as a DHCP Server cannot send a definitive response for a query by remote-id. This change has been addressed in version 03.
- Few editorial comments have been addressed in version 04.
- We feel it is now ready for a *WG last call*.
