80th IETF – Prague, March 2011

# Updates from the last version

- In Section 2.1.1, added more detailed requirement on wavelength assignment option as follow:
  - Explicit Label Control (ELC) [RFC4003]
  - Non-Explicit labels in the form of Label Sets (This will allow Distributed WA at a node level where each node would select the wavelength from the Label Sets)
- Editorial/reference update

# Summary & Next Steps

- Stable now
- The solution draft has been published (00 & 01)
- Ready for WC LC
