

Liaison Statement of Open
Mobile Alliance (OMA)
ARC SEC Sub-Working Group

*OAuth discovery and
specification availability*

<https://datatracker.ietf.org/liaison/1069/>

July 2011

OMA Questions 1/2

- What are the target dates for publications of the following drafts as RFCs
 - draft-ietf-oauth-v2
 - draft-ietf-oauth-v2-bearer
 - draft-hammer-oauth-v2-mac-token
 - draft-lodderstedt-oauth-revocation
 - draft-recordon-oauth-v2-ux?
 - When will be available the OAuth Parameters Registry for the registration of new endpoint parameters?
 - Will OAUTH WG specify the OAuth Discovery mechanism (mentioned till draft-ietf-oauth-v2-10)? If it will, when?
 - **Note: discovery is essential to OMA, in particular to cover multi-service providers scenarios.**
-

OMA Questions 2/2

- Will OAUTH WG provide a guidance for implementers on the selection of the access token type to deploy (e.g., bearer, MAC)?
- What is the set of characters that are safe to use for the values of the scope parameter?
 - Especially in [draft-ietf-oauth-v2-bearer], is the non-support of percent encoding intentional ?

OMA needs to get the answers by August 29th 2011.
