* That is, I didn't write most of this, I only helped herd the cats a bit

Yeah, I know, you forgot what this does

- Adds a relative offset to a reference point

- Uses existing PIDF CAtypes to define the base point

- Adds new CAtypes to define the offset from that point
  - Angle
  - 2D/3D Point
  - Circle/Sphere/Ellipse
  - 2D/3D Polygon
  - Prism
  - Arc Band

- Also provides a map with angle and scale

This work is about done

- Needed to have local-civic firm because this is an extension to pidf

- This version extends pidf in line with local-civic

- Adds dynamic location (orientation, speed, heading) offsets

Ready for Working Group Last Call

- No open items

- No unresolved comments

- No HOL blocking issues

- Let's get this sucker out of here
