MPLS-TP Identifiers Following ITU-T Conventions

draft-ietf-mpls-tp-itu-t-identifiers-02

R. Winter, E. Gray, H. van Helvoort, M. Betts

History

- Was part of the draft that led to RFC 6370
- Observation that ICC is not globally unique led to its removal to progress the identifiers draft
- This draft is based on an corrigendum to Y.1731 that fixes the global uniqueness problem
- Based on this LSP IDs etc. are defined analogous to RFC 6370 (sole purpose of the document)

More history

- Changes since -00 version
  - More specifics regarding the actual format of the IDs
  - Reference updates
  - Eric joined as an additional editor of the document to help align the document with RFC 6370

Next steps

- Document is close to being done
- Comments from the list to spell out all IDs in the document rather than providing the formula for ID construction
  - Next version
