

# REPUTE Working Group / Taipei

1. **Hello and Agenda Bashing (5 min)**
2. **Status of Drafts (Murray, 15 min)**
  - Agreement on 3 'categories' and assignments
3. **URI template for Repute queries (Murray / 15 min)**
  - Quick tutorial & discussion
4. **DNS vs. New UDP-based (Dave, 5 min)**
  - No apparent controversy
5. **DNS vs. HTTP - Which to use & when? (Murray 5 min)**
6. **JSON vs. XML (5 Min)**
  - Summary of online discussion, noting tradeoffs
7. **AOB, e.g.:**
  - SAMPLE-SIZE parameter currently has no units; is this a problem?
  - Ditch the plain text format and always go with XML?
  - Are RFC5322.FROM and RFC5321.MAILFROM identity tags needed?
  - Need or want to distinguish between DKIM and SPF?

# DNS vs. New UDP-based

*Short Transaction query mode*

## DNS

Established protocol infrastructure

Add data structures

Administrative barriers

## New UDP-based protocol

All of the DNS barriers

Plus needs new protocol and operations support

***No constituency in favor of new protocol?***
