Core idea

```
DHCP Server/
      pcp client |Give me some ports? ( pcp or DHCP )|
                                                            pcp server
        B4
                                                               CGN
                          Help yourself! ( pcp or DHCP )
                            in side
                                                         DHCP Server/
DHCP-client/____+
                                                                              Forwarding Po:
    pcp client
      В4
                                                                   CGN
              hum.. I wanna set up my Web Camera/a web site/P2P listening port
                   Configuring My HGW...
            o
                              via static configuration/UPnP/NAT-PMP...
                                                       HGW
                                                              Forwarding Ports
```

How it works

- Outbound Session
 - B4 behaviors
 - NAT & Encapsulation
 - AFTR behaviors
 - De-capsulation & forward
- Inbound Session
 - AFTR behaviors
 - Encapsulation & port forwarding
 - B4 behaviors
 - De-capsulation & NAT

Port Set

- Continuous Port Range
- Non-Continous/Scattered Port Sets

Scattered ports provisioning

- What's the benefits of provisioning scattered ports?
 - For incoming ports
 - Scattered ports allocation is more likely to satisfy the random incoming port requests from applications
 - such as eMule, uTorrent, sharez, using UPnP 1.0

A solution

- to distribute bulks of non-continuous ports among subscribers,
- also takes port randomization into account

How to provision scattered ports?

- Only two parameters
- Subscribers ID pattern

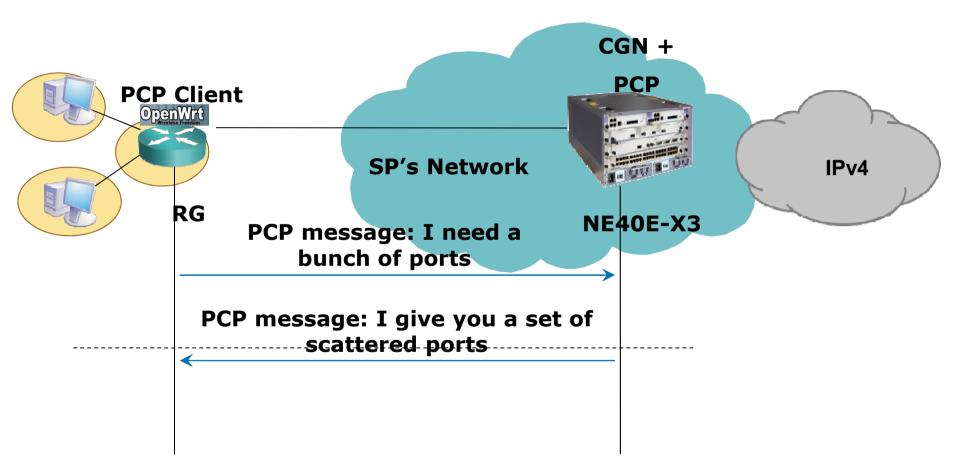

Subscribers ID value

Random ephemeral port selection within the restricted port for CPE NAT

- Subscribers ID pattern
- Subscribers ID value

Only one line code needs to be changed!

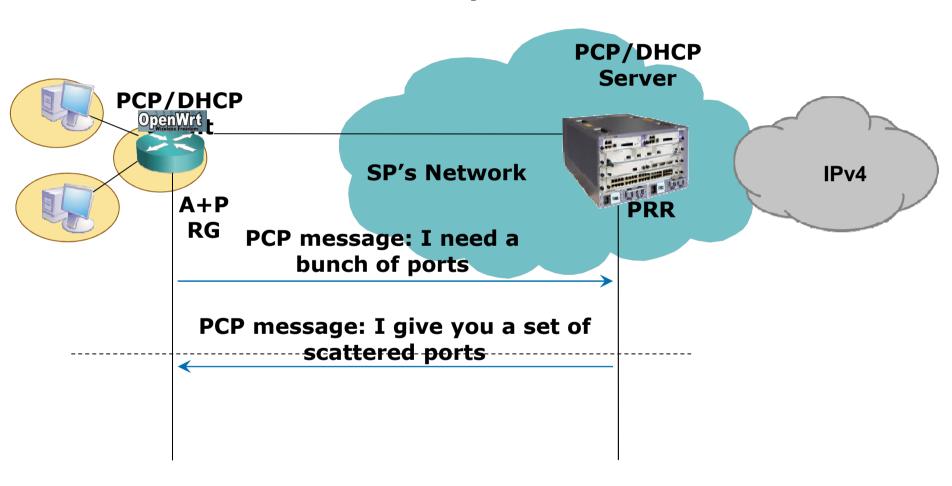

An Implementation DS-Lite encapsulation (demonstrated)

Location: 2000D

Check out website for this demo: http://130.129.48.23:35328/

Alternative implementation A+P encapsulation

Updates/action items from Softwires Interim meeting

Restricted port allocation strategies

 Merging with draft-cui-softwire-b4translated-ds-lite

Restricted port allocation strategies

- Either per port on demand
- Or pre-allocating an exclusive port set
- Trade-off: provisioning efficiency vs. IPv4 sharing ratio efficiency.
- Efficiency log
 - e.g., one log entry per customer
 - reported by some operators as a practical/operational requirement for AFTR.
 - Feasible

Questions for WG

- Non-consensus between to-be merged two drafts
- Scope?
 - draft-zhou-softwire-b4-nat
 - Extension to DS-lite
 - draft-cui-softwire-b4-translated-ds-lite
 - Per-user state IPv4-over-IPv6
- Terms?
 - draft-zhou-softwire-b4-nat
 - NAT Offload Extension Dual-stack Lite
 - draft-cui-softwire-b4-translated-ds-lite
 - Lighweight 4over6
