

# Generalized MPLS Recovery

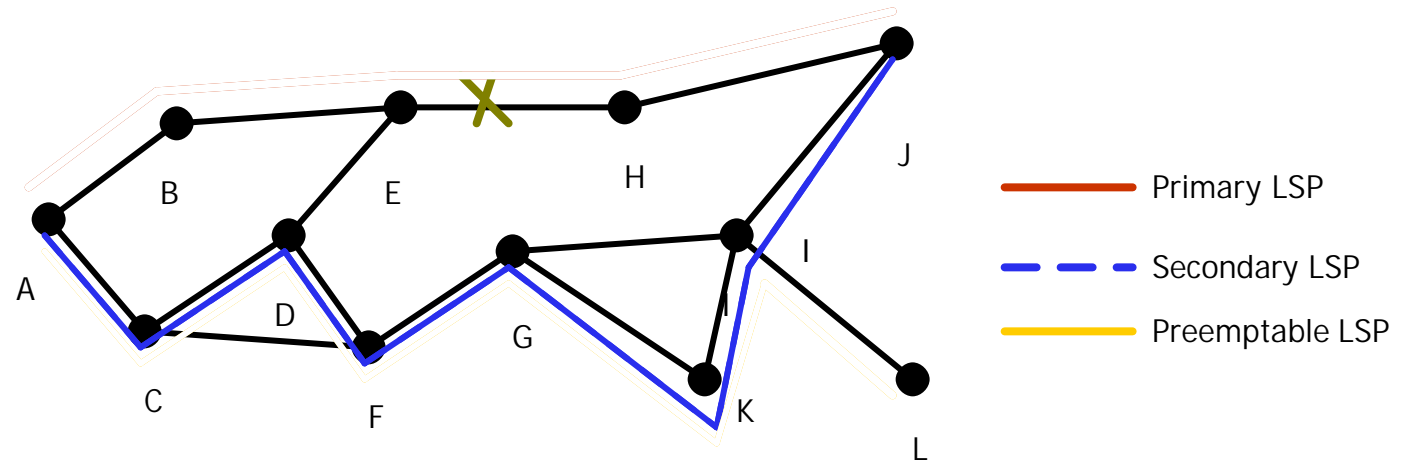

draft-lang-ccamp-recovery-00.txt

J. Lang, J. Drake, Y. Rekhter

# Draft Purpose

- Common understanding of terminology
    - Protection & restoration mechanisms
    - Path & span levels
    - Primary & secondary LSPs
  - Identify mechanisms already defined in GMPLS
  - Discuss recovery techniques that can be implemented with the current tools
- => Understand the current tools and recovery techniques so we can provide required functionality with minimal protocol changes while minimizing the number of LSPs to be rerouted (e.g., taking advantage of LSP hierarchy)

# Secondary LSPs & BW Accounting

How do you advertise bandwidth for secondary LSPs?  
How do you do bandwidth accounting?
