March 18, 2003

- This is a new encoding scheme published by ETSI for DSR (a follow-up to its ES-201-108)
- AVT WG completed RTP payload format for ES-201-108 (now in RFC editor's queue)
- Request to make this draft a WG item.

- RTP payload layout for ES-202-050 is exactly the same as that used in the ES-201-108 payload format RFC.
- Encoded frame has the same size...
- but different bit pattern (defined in ETSI document).
- Different media subtype name: **dsr-es202050**
