Analysis of Existing QoS Signalling Protocols

(draft-nsis-signalling-analysis-01.txt)

Editors: <u>Jukka Manner</u>, Xiaoming Fu

The draft

Original idea was to evaluate several existing QoS signalling protocols to gain knowledge of good and bad design ideas for a future NSIS protocol

Nearly all feedback has been about RSVP

Thus, current focus is roughly 2/3 of RSVP, 1/3 of all other protocols combined

Changes since -00: contributions to various parts of the RSVP analysis, removed ITSUMO, revised some sections, restructured the draft some

Proposal to move forward

Get more feedback (=reviews) about the other protocols **OR** focus primarily on RSVP by

- Adding text from the Thomas-draft on Mobile IP and RSVP interactions (draft-thomas-nsis-rsvp-analysis-00.txt) – sign. diagrams could be an appendix?
- Adding text from draft-pan-nsis-rsvp-transport-01.txt
- Add more RSVP analysis, edit current structure to put other protocols as subsections rather than full sections

Is some important protocol missing? Provide text

Should some protocol(s) be removed?
