

ForCES Meeting Summary, IETF 57

=====

ForCES met at IETF 57 for two hours with an attendance of approximately sixty people. WG status was presented - the framework and requirements have had small updates made in response to AD/IESG feedback, with new revisions to be published soon, then on to IESG review. The model individual draft was presented and received strong support for inclusion as a WG document - the chairs indicated they would verify this consensus on the mailing list. The NetLink2 and FACT protocol proposals were presented, and the chairs indicated that it was time to begin discussion of what the protocol selection process should be. Finally, a demonstration was given of a pre-association phase protocol implementation. While there was interest in the work, the comments made in the room suggested deferring work on this part of the framework until the main ForCES protocol effort progresses further.
