

# **Extended RTP Profile for RTCP-based Feedback (RTP/AVPF)**

Jörg Ott, Stephan Wenger  
Noriyuki Sato, Carsten Burmeister, Jose Rey

AVT WG - 4 August 2004

# Changes

- Removed all text hinting at possible usability of feedback for congestion control
  - Do not convey improper “safe feeling” about CC
  - Leave CC to mechanisms that can react in the order of RTT and convey the right information
- Removed “Generic ACK” message
  - Avoid implicit suggestion of “reliable transport”
  - Application/payload-specific ACKs remain
- Editorial stuff...
  - New I-D boilerplate

# Next Steps

- Incorporate remaining IESG comments
- Back to IESG
