

# MSNIP Status

Brian Haberman

MAGMA WG – IETF 60

# Where We Stand

- MSNIP held up on SSM range configuration issue
  - Anyone interested in picking up the work?
- MRDSSM spec in holding pattern waiting on MRD spec (essentially DEAD)
- Issues with piggy-backing host-to-router information on a router-to-switch message
- Consensus to not support configurable SSM ranges
  - MSNIP goes forward with fixed SSM range

Thoughts?
