

# NFSv4 WG Meeting

3 August 2004

[spencer.shepler@sun.com](mailto:spencer.shepler@sun.com)

# Draft Status

- XDR
- RPC (protocol and transfer)
- NFSv4.1 SECINFO
- CCM
- ACL Mapping
- Use of Channel Bindings

# Draft Status cont...

- NFS RDMA problem statement
- RDMA Transport for ONC RPC
- NFS Direct Data Placement
- NFSv4.1 Directory Delegations and Notifications
- NFSv4 Session Extensions

# NFSv4 Minor Versions

Let's get started

- I-Ds are piling up with good ideas
- Initial implementations are “complete” and deployment is occurring (resources are becoming available)
- Implementation experience is pointing to additional opportunities

# NFSv4.1 Content (?)

- SECINFO fixes
- stringprep choices
- Directory Delegations
- Sessions
- ACL clarifications
- Other (how much, when to say when)

# Process

- Take what is there today
- Last call for content
- Review content for interesting customer solution
- Initial combined I-D
- Implementation experience – is it required?

# Issues

- Limit content
- One RFC (v4.0 and v4.1)?
- Dependencies between .1 items
  - Addresses issues of some functionality holding delivery of others
- Are all functional items needed
