

TCP Roadmap Status

draft-ietf-tcpm-tcp-roadmap-01.txt

IETF 62 - March 2005

Minneapolis, MN

**TCPM chairs for the authors
(Duke, Braden, Blanton, Eddy)**

Roadmap Status

- 01 draft is out
- ▷ several additions and reorganizations from 00 version
- ▷ have received some positive feedback and suggestions
- ▷ could use even more feedback
- please send to both authors and list

Roadmap Changes

The roadmap should document things that are stable (RFCs), and not mention anything that is work in-progress (I-Ds).

- I-D notes
- ▷ Eifel-response is now an RFC
- ▷ awaiting two docs in RFC Editor's queue
- ▷ removing note about tcpsecure

Roadmap Open Issues

- Jumbograms (RFC 2147)
 - ▷ Pekka Savola - jumbogram support **shouldn't** be classified with the things that are basic functionalities for interoperability
 - jumbogram support not universally implemented
 - ▷ Wesley Eddy - **should** be classified as in the current draft
 - standards track, and doesn't influence the non-jumbogram case, TCPs should just do this
 - ▷ Bob Braden - explain the issue, let the reader make the call
 - ▷ anyone else care to comment?
