NTP-MIB Review and Modifications

Chris Elliott, Cisco Systems, Inc.

Summary of Modifications to MIB

- Changed wording to refer to entity instead of service, service instance, etc.
- Changed object names (Srv->Ent) to reflect the above change
- Changed:
 - ntpSrvStatusCurrentState to ntpEntStatusCurrentMode
 - ntpSrvStatusCurrentStateVal to ntpEntStatusCurrentModeVal
 - Mode represents the contents more accurately:
 - "not running", etc.

Summary of Modifications to MIB

- Added association stratum object -> ntpAssocStratum
- Added Leap Second objects:
 - ntpEntStatusLeapSecond
 - ntpEntStatusLeapSecDirection

Summary of Modifications to Draft Text

- Changed RFC to Internet
- Changed wording to refer to entity instead of service, service instance, etc., as per the MIB
- Revised the security considerations as there are now read-write objects
- Added myself as a co-author
- Fixed some lines that were longer than 72 characters

To Do

- CONTACT-INFO still needs correct information
 - Proposed:

WG Email: ntpwg@lists.ntp.isc.org

Subscribe: https://lists.ntp.isc.org/mailman/listinfo/ntpwg

<contact info>

To Do

- Define TCs for types that might be useful elsewhere?
 - Proposed:
 - Stratum TC
 - NTP time TC
- Notification for when synced?
 - Proposed:
 - change ntpEntNotifNotInSync to ntpEntNotifCurrentMode
 - Describe the notification as being triggered when ntpEntStatusCurrentMode changes mode, including initial and terminal mode changes
 - We could then eliminate:
 - ntpEntNotifEntityStarted
 - ntpEntNotifEntityStopped

To Do

- Change conformance/compliance for different uses:
 - NTP entities
 - All objects and notifications mandatory
 - SNTP entities
 - Only the following objects mandatory:

```
ntpEntSoftwareName,
ntpEntSoftwareVersion,
ntpEntSoftwareVersionVal,
ntpEntSoftwareVendor,
ntpEntSystemType,
ntpEntStatusEntityUptime,
ntpEntStatusTime,
ntpAssocName,
ntpAssocRefld,
ntpAssocAddressType,
ntpAssocAddress
```

All notifications optional
