ICE-TCP

Jonathan Rosenberg

Cisco

Changes in -05

- Fixed bug in pseudocode
- Clarified that secure media is always SRTP over TCP, not RTP over TLS
- Added Jonathan L's suggestion from Chicago – if you see STUN packet in the data stream, change length to that STUN validity checks fail
- Removed moves
- Clarified using TURN to get relayed S-O and passive candidates

Open Issue

- Lite implementation for ICE-tcp
  - Passive candidates only
  - But when facing another lite implementation, revert to comedia
- Can be made to work, will complicate setting of direction attributes and selection of default candidates
- How much is this needed?

Next Steps

- Blocked on TURN-tcp
- Would like to get implementations to fully test
