Session Initiation Protocol (SIP) INFO Method Use

Eric Burger

draft-burger-sip-info-02

Changes from -01

- François language in Abstract
- Screwed up and forgot ECMA-355 again (will restore if another draft)
- Split out Message Context versus Dialog Reuse issues with INFO
- Restructured document into Models for UUI and Alternatives to INFO
- More text around when it is appropriate for using in-dialog UUI signaling

Nit to Point Out
(read the text)

- Looks like not possible to create any backwards-compatible mechanism

- If use Require: and UAS is not upgraded, call fails

- If UAS is upgraded, UAC will never ask for proper INFO use
