Bulk Leasequery for DHCPv6

draft-ietf-dhc-dhcpv6-bulk-leasequery-00

Mark Stapp (mjs@cisco.com)

Overview

- Use a TCP connection between Relay and Server

- 'Relay-DUID' option to … identify the relay

- New queries:
  - by Relay-ID
  - by Relay-Remote-ID
  - by link-address

Status

Accepted as a working-group item after Vancouver meeting

Revised draft; tried to clarify relationship with UDP leasequery, improve text about error statuses

Some follow-up discussion on dhc mailing list about the use of the Remote-ID in a DOCSIS/Cable context – I *think* that concluded

Next Steps

- Are there any remaining issues?

- Proceed with a WG Last-Call?
