draft-narayanan-tsvwg-rsvp-resource-sharing Status

- Resource Sharing is about allowing resources to be shared across arbitrary set of reservations (e.g. for shared lines)

- Key extensions have been moved into berger-ccamp-assoc-info (because leverages ASSOCIATION object). Plan is to have this work progressed in CCAMP

- What remains in draft-narayanan-tsvwg-rsvp-resource-sharing is an incremental mechanism (on top of berger-ccamp-..) allowing the sender to communicate the "Association ID" to the receiver

- RSVP Directorate consulted about this work. Waiting for their recommendation + AD decision (e.g. progressed in TSVWG or in CCAMP?)
