draft-ietf-isis-ieee-aq-05

Datatracker State: **IESG Evaluation::AD Followup**
(Has enough positions to pass.)

- Addresses numerous minor nits/typos etc.

- Some clarifications around multi topology, adjacencies, security.

- Main issue resolved was one of normative v.s.
  non normative references.

- Since the IS-IS TLV related parts of aq-05 are normative they use normal MUST/SHOULD etc. language, but much of the descriptive text included IEEE normative text. We disambiguated the two SDO's normative language.

- Also – 2nd interop based on aq-05 likely in ~1 month interested parties welcome to join. So far { Alu, Avaya, Huawei }.
