

# IPv6 RADIUS attributes for IPv6 access networks draft-ietf-radext-ipv6-access

Glen Zorn, Benoit Lourdelet  
Wojciech Dec, Behcet Sarikaya, David Miles

Radext WG group  
IETF 81

# Status

- All issues raised in previous WG-last call resolved as proposed.
- One new editorial comment

# Stateful-ipv6-address-pool

- Needed to resolve ambiguity between local and delegated IP address pools led to the addition of a stateful-ipv6-address-pool-attribute
- Fair bit of discussion on the why's and alternatives:
  - Parsing the string/pool name in existing attributes
  - Creating one new “pool of all pools” complex attribute
- Author's conclusions are:
  - Using existing pool attributes would require name/string parsing (+ result in unspecified error conditions)
  - Doing away with existing pool attributes is unlikely

# Next step

- Submit next version of draft addressing Bernard's editorial comment.
- Move on to IESG review?

Thank You !
