Draft-ietf-v6ops-v6nd-problems-00 for IETF-82

Igor Gashinsky
Joel Jaeggli
Warren Kumari
11/10/2011

History

- Draft-gashinsky-v6nd-enhance-00

  - Discussed in v6ops and 6man

  - Proposed operational "hacks", implementation specific guidance, and protocol changes.

  - Support for the intent of the document

    – Maybe gratuitous ND is not such a great idea...

- Draft-gashinsky-v6ops-v6nd-problems

  - Separate the problem statement, mitigation and implementation advice from standards action.

  - Support for acceptance as a WG document in v6ops

Present.

- Draft-ietf-v6ops-v6nd-problems-00

    - Commentary incorporated from:

        – John Jason Brzozowski

        – Tassos Chatzithomaoglou

        – Wes George

        – Hemant Singh

- Basic questions:

    - Is the document complete?

    - The focus is on mitigations that conform with existing assumptions about ipv6 sub-net practice. Is that sound?

    - Is the implementation advice helpful?

        – Does it open it up to more problems?

    - Is enhancement to V6ND process (standards) worthwhile?
